

# Lattice — Feature Showcase

---

Open this file with Lattice to see every feature rendered live.  
Switch between **Edit**, **Preview**, and **Dual** view with the toolbar selector.  
Try `Ctrl/Cmd+Shift+T` to auto-generate the Table of Contents below.

## Table of Contents

## Text Formatting

Normal paragraph text flows here. Lattice renders Markdown as **close to GitHub** as possible, so files look identical whether viewed in the editor preview, on GitHub, or printed.

| Style         | Syntax                                    | Result                   |
|---------------|-------------------------------------------|--------------------------|
| Bold          | <b><code>**bold**</code></b>              | <b>bold</b>              |
| Italic        | <i><code>*italic*</code></i>              | <i>italic</i>            |
| Bold + italic | <b><i><code>***both***</code></i></b>     | <b><i>both</i></b>       |
| Strikethrough | <del><code>~~strikethrough~~</code></del> | <del>strikethrough</del> |
| Inline code   | <code>`code`</code>                       | code                     |
| Superscript   | <code>X&lt;sup&gt;2&lt;/sup&gt;</code>    | X <sup>2</sup>           |
| Subscript     | <code>H&lt;sub&gt;2&lt;/sub&gt;O</code>   | H <sub>2</sub> O         |

**Note — sub/superscript:** CommonMark/GFM has no native sub/superscript syntax. Lattice renders `<sup>` and `<sub>` HTML tags directly (GitHub and Obsidian do too). We recommend, though that you use alternatives that work everywhere: KaTeX math ( `$x^2$` →  $X^2$ , `$H_{20}$` →  $H_2O$ ) or Unicode characters ( `x²` , `H₂O` ). The linter flags these tags as a portability hint — they may not render in all renderers.

## Highlight Marks

Highlight marks are a Lattice-exclusive feature. Wrap any text in `==double equals==` to render it with a bright amber background.

This works in **any context** — inside a sentence, `==across italic and bold spans==`, or on its own line:

This entire sentence is highlighted.

[!NOTE] Highlight marks are **not** rendered inside code blocks or inline code — `==this stays raw==` .

# Lists

---

## Unordered

- First item
- Second item
  - Nested item A
  - Nested item B
    - Deeply nested
- Third item with **bold** and *italic* text

## Ordered

1. Install Lattice from the [releases page](#)
2. Open any `.md` file — double-click or via **File** → **Open**
3. Choose your view:
  - i. **Edit** — raw CodeMirror editor only
  - ii. **Preview** — rendered HTML only
  - iii. **Dual** — side-by-side (four layout variants)
4. Print with `Ctrl/Cmd+P` — always renders to a clean light theme

## Definition-style (using bold + indent)

**Local-first** All files stay on your machine. No cloud sync required.

**Documents as Code** Plain-text `.md` files are diff-friendly, version-controlled, and AI-ready.

## Task Lists (GFM)

---

GitHub Flavored Markdown task lists render as interactive checkboxes in Lattice.

- ☒ Install Lattice
- ☒ Open the demo file
- ☒ Explore Edit / Preview / Dual views
- ☐ Try `Ctrl/Cmd+Shift+T` to regenerate the Table of Contents
- ☐ Try `Ctrl/Cmd+Shift+L` to auto-align a pipe table

- ☐ Paste a screenshot with `Ctrl/Cmd+V` — it auto-saves to a sibling folder
- ☒ Open a second file in a new window (multi-window support)
- ☐ Try printing to PDF with `Ctrl/Cmd+P`

## Tables

---

Lattice supports **GFM pipe tables** with left, center, and right alignment. Press `Ctrl/Cmd+Shift+L` with the cursor anywhere in the table to auto-format it.

| Feature               | Edit View | Preview View | Dual View |
|-----------------------|-----------|--------------|-----------|
| CodeMirror editor     | ✓         | —            | ✓         |
| Live rendered preview | —         | ✓            | ✓         |
| Scroll sync           | —         | —            | ✓         |
| Print (Ctrl+P)        | ✓         | ✓            | ✓         |
| Highlight marks       | ✓         | ✓            | ✓         |
| Mermaid diagrams      | —         | ✓            | ✓         |
| KaTeX mathematics     | —         | ✓            | ✓         |

## Code

---

### Inline code

Use backticks for `inline code`. Great for `file/paths`, `commands`, and `variable_names`.

### Fenced code blocks

Lattice passes code fences to the preview unchanged — syntax highlighting is provided by the renderer.

```
// Lattice highlight-mark plugin – converts ==text== to <mark> elements
export const MARK_RE = /==(?:[^\n]|(?:!|=))+?)/g;

export function splitAtMarks(text: string): HastNode[] {
```

```

const parts: HastNode[] = [];
let lastIndex = 0;
MARK_RE.lastIndex = 0;
let match: RegExpExecArray | null;
while ((match = MARK_RE.exec(text)) !== null) {
  if (match.index > lastIndex)
    parts.push({ type: 'text', value: text.slice(lastIndex, match.index) });
  parts.push({
    type: 'element', tagName: 'mark',
    properties: {},
    children: [{ type: 'text', value: match[1] }],
  });
  lastIndex = match.index + match[0].length;
}
if (lastIndex < text.length)
  parts.push({ type: 'text', value: text.slice(lastIndex) });
return parts;
}

```

```

// Tauri command – read file with conflict detection
#[tauri::command]
pub async fn read_file(path: String) -> Result<FileReadResult, String> {
  let content = fs::read_to_string(&path)
    .map_err(|e| format!("Cannot read {path}: {e}"));
  let hash = compute_sha256(&content);
  Ok(FileReadResult { content, hash })
}

```

```

# Build a production release
export LATTICEBUILD_NO="MyBuild-001"
npm run tauri build

```

## Blockquotes

---

Single-level blockquote. Great for callouts, citations, or side notes.

Nested blockquotes are also supported:

Inner quote — *"Documents as code, not documents as data."*

— Lattice design philosophy

## GitHub-style Alerts (rendered by GitHub and Lattice)

[!NOTE] Useful information that users should know, even when skimming.

[!TIP] Optional advice for a better experience.

[!IMPORTANT] Key information users need to know to achieve their goal.

[!WARNING] Urgent information that needs immediate attention.

[!CAUTION] Advises about risks or negative outcomes.

## Mathematics — KaTeX

---

Lattice renders mathematics via **KaTeX**. Use  $\dots$  for inline and  $\displaystyle \dots$  for display math.

### Inline math

Einstein's famous equation  $E = mc^2$  and the quadratic formula  $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$  render inline.

The Euler identity  $e^{i\pi} + 1 = 0$  is often called the most beautiful equation in mathematics.

### Display math — Calculus

$$\int_{-\infty}^{\infty} e^{-x^2} dx = \sqrt{\pi}$$

$$\frac{d}{dx} \left[ \int_a^{g(x)} f(t) dt \right] = f(g(x)) \cdot g'(x)$$

### Display math — Linear Algebra

$$\mathbf{Ax} = \lambda \mathbf{x} \implies \det(\mathbf{A} - \lambda \mathbf{I}) = 0$$

$$\begin{pmatrix} a & b \\ c & d \end{pmatrix}^{-1} = \frac{1}{ad - bc} \begin{pmatrix} d & -b \\ -c & a \end{pmatrix}$$

### Display math — Series & Limits

$$e^x = \sum_{n=0}^{\infty} \frac{x^n}{n!} = 1 + x + \frac{x^2}{2!} + \frac{x^3}{3!} + \cdots$$
$$\lim_{n \rightarrow \infty} \left(1 + \frac{1}{n}\right)^n = e$$

## Mermaid Diagrams

Lattice renders ````mermaid```` fenced blocks inline in the preview.

### Flowchart — Lattice Edit Cycle

### Sequence Diagram — File Open Flow

## Class Diagram — Core Data Model

## Pie Chart — Supported Platforms

## Lattice Platform Coverage

## Images

---

Paste images directly into Lattice with `ctrl/cmd+v`.

The image file is automatically saved to a sibling folder named after the current document, and a Markdown reference is inserted at the cursor position:

```
![Image](demo_assets/img_1780574419628.png)
```

```
![Image](demo_assets/img_1780575215039.png)
```

Here is how it renders in `Dual (edit on the left) mode`:

## HTML in Markdown

Lattice renders a **safe whitelist** of inline HTML tags and passes everything else through as literal text. The linter flags all inline HTML — whitelisted tags get a **hint** (portability risk), non-whitelisted tags get a **warning** (not rendered here).

| HTML element | Lattice preview | GitHub | Portable alternative                        |
|--------------|-----------------|--------|---------------------------------------------|
| <sup>        | ✓ rendered      | ✓      | KaTeX: $x^2$ → $X^2$ · Unicode: $x^2$       |
| <sub>        | ✓ rendered      | ✓      | KaTeX: $H_2O$ → $H_2O$ · Unicode: $H_2O$    |
| <kbd>        | ✓ rendered      | ✓      | Inline code: <code>`Ctrl+S`</code>          |
| <br>         | ✓ rendered      | ✓      | Two trailing spaces or blank line           |
| <mark>       | ⚠ plain text    | ✓      | <code>==highlight==</code> (Lattice-native) |
| <details>    | ⚠ plain text    | ✓      | Headings + TOC (no universal equivalent)    |
| Other HTML   | ⚠ plain text    | varies | Markdown equivalent (case-by-case)          |

Live examples of the whitelisted tags:

- Superscript:  $X^2 + Y^3$
- Subscript:  $H_2O$  and  $CO_2$

- Keyboard: press `Ctrl + S` to save
